Resolution

Protest against the entry into force of the new labor laws in India

We, the participants of the 3r International Automotive Workers' Conference, strongly protest against the entry into force of the new labor laws in India. This is an attack on the entire working class of India, which is also being portrayed as progress in the media.

In fact, it restricts workers' strikes because they must be registered in advance. Trade union organization is being made more difficult and night work is also being extended to women. And this is happening precisely at a time when workers from at least 11 countries are meeting in Pune, India, to further develop their international solidarity and cooperation.

The trade unions' response with a national day of action on November 26, 2025, is exactly right. This legislation must be withdrawn by the Indian government!

We have reaffirmed the slogan "*No struggle should stand alone!*" and will make the struggle of the working class in India against this dismantling of their democratic rights known throughout the world!

(Unanimously adopted by the closing plenary of the 3rd International Automotive Workers' Conference on November 24, 2025)
